

## Cyber Bogie and Threat Discovery Template

Write down the Cyber Bogies that you think would attack or harm the system.

- **Assets:** Can be tangible or non-tangible. E.g. database, server, SSO system, C/I system, reputation, ...
- **Attack vectors:** Ways for the attackers to get in or places where someone can make a mistake. For example, all user interfaces and APIs. Also reading emails and opening attachments.
- **Motivation:** Money, getting bragging rights, curiosity, something else?
- **Existing mitigations:** Does the system in question already have something that would prevent this? Both technical and non-technical (process) mitigations can be considered.

Your name					
Cyber Bogie name	Assets that this Cyber Bogie causes harm to	Attack vectors	Motivation to misuse the system	Existing mitigations	Points
